PROFESSIONAL SUMMARY

UI/UX Designer with a rare combination of 1.5+ years of hands-on healthcare operations experience at Cognizant and formal UX training from IDM Tech Park. I design with domain depth — having personally lived the complexity of clinical workflows, fragmented digital systems, and high-cognitive-load environments that most designers only read about in case studies. My work spans end-to-end product design: user research, information architecture, wireframing, prototyping, and high-fidelity delivery in Figma. I'm drawn to products where design decisions genuinely change how people experience healthcare, travel, or daily life — and I'm seeking a UI/UX or Product Designer role at a global product company or MNC where that kind of intentional design is valued.

EXPERIENCE

UI/UX Designer — Product Projects · IDM Tech Park

Jan 2025 – May 2026

Certification Program · End-to-End Product Design

- Led complete UX process for VETSSREACH, a veterinary mobile app — from discovery to delivery of 40+ screen prototype, achieving 92% task completion rate and SUS score of 82/100 with usability test participants
- Conducted in-depth user interviews, focus groups, and shadowing sessions; translated findings into 3 user personas, empathy maps, and journey maps that surfaced core unmet needs
- Delivered a complete Figma design system and component library — reducing screen-to-screen design inconsistency by standardizing 30+ reusable components across the product
- Ran competitive benchmarking against Vetster, Petdesk, Pawprint, and Practo — identifying 5 key feature gaps that directly shaped product scope decisions
- Redesigned DigiYatra's onboarding and error-state flows to address accessibility gaps and improve first-time experience for a diverse, multi-demographic user base
- Built 4 responsive front-end projects (HTML/CSS/Bootstrap/React) deployed live on GitHub Pages, demonstrating design-to-code handoff capability

Process Executive · Cognizant Technology Solutions

Mar 2025 – Present

Healthcare Operations · Insurance Claims Processing

- Process and validate healthcare insurance claims in a high-accuracy, compliance-regulated environment — building first hand mastery of clinical workflows, healthcare data standards, and patient record systems
- Identified recurring friction points in internal digital tools while processing claims — developing designer-level empathy for cognitive load, workflow fragmentation, and error-prone interfaces in health tech
- Consistently met daily quality and TAT benchmarks through cross-functional collaboration, demonstrating the attention-to-detail and structured thinking that directly transfers to UX decision-making
- Domain knowledge spans insurance claims lifecycle, clinical coding logic, patient data management, and compliance frameworks — giving my health tech design work a credibility edge most UX designers can't replicate

SELECTED PROJECTS

VETSSREACH — Veterinary Mobile App · End-to-End UX · 2026

- 92% task completion rate and NPS of 45 achieved through iterative testing with participants across rounds of usability testing
- Research-driven design: interviews + ethnographic shadowing sessions → validated pain points → prioritised feature backlog
- Delivered production-ready prototype: 40+ screens, full design system, component library, and clickable Figma prototype

DigiYatra — UX Audit & Redesign · App Redesign · 2026

- Conducted structured UX audit of India's national facial recognition airport boarding app — documented critical usability gaps across onboarding, error handling, and navigation
- Prioritised accessibility improvements targeting first-time and non-tech-savvy users; simplified multi-step flows into streamlined, jargon-free interactions

Front-End Development — Live Projects · HTML / CSS / Bootstrap · 2025–26

- LeadGen Sofa Website — responsive lead generation landing page with conversion-focused layout
- Yedzi Bike Website — product showcase with strong visual hierarchy and mobile-first responsive design
- Paramount Pictures Redesign — cinematic web concept using HTML, CSS, and Bootstrap

SKILLS

UX & Research: User Research, Usability Testing, Wireframing, Prototyping, Information Architecture, Empathy Mapping, Journey Mapping, Competitive Analysis, Design Systems.

Tools: Figma, Adobe XD, Adobe Photoshop, Adobe Illustrator, Miro, Framer

Front-End: HTML5, CSS3, JavaScript, React, Bootstrap, Responsive Design, GitHub, Web Accessibility (WCAG)

Domain: Healthcare Operations, Clinical Workflows, Insurance Claims, Patient Data Systems, Health Tech

Soft Skills: User Empathy, Strategic Thinking, Cross-functional Collaboration, Attention to Detail, Stakeholder Communication

EDUCATION

B.Sc. Information Technology

2021 – 2024

Sri Ramakrishna College of Arts & Science, Coimbatore · First Class — 80% Aggregate

CERTIFICATIONS

- UI/UX Design Certification — IDM Tech Park, Coimbatore (2025–2026)
- Figma to WordPress — Udemy
- RPA & Automation — UiPath
- Introduction to HTML — SoloLearn
- Cybersecurity Workshop — Attended
